Simplifying machine vision with digital twins and synthetic images

M. Sc. Richard Metzler, M. Eng. Maximilian Grau - Medabsy UG, Dingolfing

In this presentation, the startup **Medabsy** UG (Dingolfing) shows how digital twins and synthetic images can be used to simplify machine vision. This offers new possibilities to simplify various process steps. The latest developments in the field of computer visualization are shown, their potential explained and application examples are shown, making it clear that now is the right time to enter this field.
